Let's Start!

Let's talk about security issues!

Learning Outcome:

Describe common activities at work to a visitor using short sentences in familiar spoken and written situations.
Understand information about data and its structure in simple spoken and written situations.

Ask your partner:

- How do you keep safe your information on computers?
- What typical problems do you know concerning data security in companies?

Can Do Statements:

- I can talk about the importance of data security for different types of enterprises.
- I can explain why a company needs to secure data.
- I can give important information about data security.

Let's Explore!

We need to secure all data!

Instructions: Read the text below.

Andrea: Hi, Jimmy! So, today I'm going to explain to you something important about data security. I understand you are going to be in charge of the personnel area, right?

Jimmy: Yes, I am. I'm working with that area.

Andrea: Ok, perfect! I'm going to start by telling you why it is important for us the data security in all of our areas. As you know, this company possesses a multiuser network system. It means that all people who are working within computing environments can have access to all system files from the company. In this way, it's vital for us to determine different users' status for each employee in here. So, for example, you receive an administrator status that will allow you to have access to important data in your area, but at the same time, you will have restrictions to access other available data in the network. This is one of the most useful security mechanisms to avoid data breaches.

Jimmy: Why is it important to secure data?

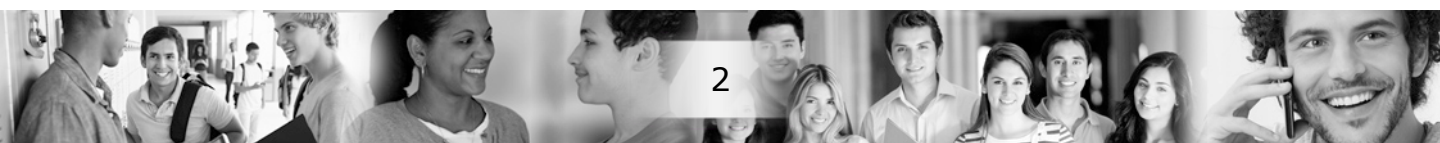

Andrea: Because either people or a malicious program can steal or even destroy important information or system files from the company just by accessing them from other portals. For example, I know that universities and financial institutions are constantly facing data theft. Also, viruses can be loaded to those files what it will be a difficult situation for us.

Jimmy: Why are we securing data in this company?

Andrea: Because we are managing some important information from other companies. At this moment, we're developing an encryption code which consists in protecting valuable data from reading by encoding its content. Finally, remember that employees can only have access to files that you share as public or that they create. If by any chance you need someone to work on a file that is restricted, you can give them permissions for working with those files.

Jimmy: I understand, thanks for explaining!

Andrea: No problem! Let's check the username you are going to use.

Let's Practice!

Every job position has a different access to information.

Instructions: Underline all the sentences that contain preposition + ing.

Sarah: Good morning everyone! Today, I'm going to start by telling you why it is important data security in companies. For example, universities generally face data breaches, so they need to protect their valuable information in some way. At this moment, we're developing an encryption code which consists in protecting valuable data from reading by encoding its content. With respect to another types of enterprises, such as government agencies and financial institutions, managers prefer to restrict access to some kind of information in order to avoid security problems. However, if by any chance you need someone to work on a file that is restricted, you can give them permissions for working with those files.

Let's Practice!

We must secure data!

Instructions: Organize the mystery sentences. Read the sentences aloud. Check your pronunciation with your instructor.

1. A / file / affect / is / a / network / , / it / is / going / corrupting / to / computer / all / the /

2. company's / access / to / , / they / are / to / increase / the / information / security / . / restricting / Managers / going / are

3. administrator / work / is / the / going / user / status / the / engineer / and / is / to / on / that / . / An / determining

Extension Activity

Updated Ways to Protect Files and Data.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for new ways companies are protecting data and files nowadays.
- Make a list with these new ways and explain each one in detail.
- Write a brief text describing each one of the new ways companies are implementing to protect data and files.
- Include the grammar and vocabulary you studied in this unit.
- Share your text with your teacher and classmates.

Self-Assessment

- | | Yes | No |
|--|-----------------------|-----------------------|
| 1. I investigate about new ways to protect data and files in a company. | ☐ | ☐ |
| 2. I list and explain the new ways I found. | ☐ | ☐ |
| 3. I write a short text giving information about new ways to protect data and files. | ☐ | ☐ |
| 4. I use the grammar and vocabulary I learned in this unit. | ☐ | ☐ |
| 5. I talk about new ways to protect data and files with my teacher and classmates. | ☐ | ☐ |

Target Words

- **data breach** (noun): accessing to unauthorized accounts to steal information
e.g. You will have restrictions to access other available data in the network. This is one of the most useful security mechanisms to avoid data breaches.
- **personnel** (noun): group of workers in any company
e.g. I understand you are going to be in charge of the personnel area, right?
- **malicious** (adjective): dangerous, unreliable
e.g. Because either people or a malicious program can destroy important information or system files from the company.
- **multiuser** (noun): something that allows many people to work with it
e.g. As you may know, this company possesses a multiuser network system.
- **network** (noun): a system that permits to exchange information via computers
e.g. As you may know, this company possesses a multiuser network system.
- **encryption code** (noun): particular password that only allows access to authorized members of an organization
e.g. We're developing an encryption code which consists in protecting valuable data from reading by encoding its content.

Learning Points

Present Continuous vs Be Going to in Affirmative

You can use the “**present continuous tense**” to talk about actions that are happening in a precise moment in the present. On the other hand, you use “**be going to**” to express intentions in the immediate future.

To create an affirmative statement in the “**present continuous tense**” you need to use the auxiliary verb to be and the main verb in -ing form.

Structure:

Subject + **auxiliary verb to be** + main verb + **ing** + complement

Example:

We **are securing** all data in our company.

On the other hand, to create an affirmative statement with “**be going to**” you need to use the auxiliary verb to be, going to and the main verb in its base form.

Structure:

Subject + **auxiliary verb to be** + **going to** +
main verb in base form + complement

Example:

Our engineers **are going to send** a report later.

Examples

- *It means that all people who are working within computing environments can have access to all system files from the company.*
- *For example, I know that universities and financial institutions are constantly facing data theft.*
- *So, today I'm going to explain you something important about data security.*
- *I understand you are going to be in charge of the personnel area, right?*

Learning Points

Preposition + Ing

Whenever you use a verb **after** some prepositions you need to include **-ing** in the verb.

These are the prepositions that you can use with the -ing form.

(CHART 1)

Watch out!

As you can see, the preposition "to" is not in the chart since it usually works with infinitive form and not with -ing form.

Example:

*We changed our passwords **to avoid** any data theft.*

Preposition	Example
At	Tim is good at developing security software programs.
About	They need to decide about giving file permissions to all staff.
For	Thanks for helping me with the data security.
In	The company is interested in implementing a more modern operating system.
Of	She is tired of asking for permissions to have data access every day.

Examples

- *I'm going to start by telling you why it is important for us the data security in all of our areas.*
- *We're developing an encryption code which consists in protecting valuable data from reading by encoding its content.*
- *You can give them permissions for working with those files.*
- *Thanks for explaining!*
